The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakatsu et al.

Nakatsu et al teach a composition comprising a benzaldehyde derivative and a cooling agent (see column 4, lines 22-29).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakatsu et al in view of Kupper et al.

Nakatsu et al disclose benzaldehyde derivatives and a cooling agent, where the composition is used in various products at an amount of from 0.0001 to 10% by weight (see entire document, especially all of column 3 and column 4, lines 22-29).

The claims differ as to the specific recitation of additional components.

Kupper et al disclose the conventional combination of warming and cooling agents (see entire document, especially claims 6-10).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to add additional warming agents to that of Nakatsu et al as taught

Art Unit: 1761

by Kupper et al because the combination of warming and cooling agents is conventional in the art. The components are used to obtain no more than expected results.
